

Where are we with jails?

Bjorn A. Zeeb (bz@FreeBSD.org)

FreeBSD DevSummit 201010,

EuroBSDCon, Karlsruhe, Germany

VIMAGE

- Kernel option and generic term for all subsystem V_irtualization.
- Generalized Framework in p4.
- A lot less code per subsystem.
- Linker and interactive kernel debugger are subsystem unaware.
- Has yet to prove with a 2nd subsystem.

VNET

- Old TODO list: 2.5 firewalls, ipx, ...
see (soon to be updated) [wiki/Image/TODO](#)
- Cloned interfaces, USB, Cardbus, .. in p4.
- Teardown top-down approach, started in p4
but also missing locking, ...
- Some more global symbols, ...
- Need more hands!

More stuff

- VIPC (two candidate patches floating)
- Hierarchical Resource Limits
- Configuration (Jamie is here)
- Docs
- VPROC
- (jail)init
- per-jail audit support
- priv(9) management
- Console (as in dmesg and as in getty)

Summary

- What can we get stable for 9.0?
- How many (former) OpenSolaris users?
- Coordinate more hands.
- Volunteers?
- Volunteers?
- Volunteers?
