DNS in FreeBSD 11

FreeBSD Developer Summit, EuroBSDCon 2013

Danmarks plads på Internettet

Current state

- unbound imported
- ldns imported
- host replacement imported
- drill imported, needs dig shim
- OpenSSH uses ldns for SSHFP checking
- local resolver only
- DNSSEC validating

Wishlist for 11.0

- caching, validating resolver library
- capsicum compartmentalized
- standardized API (get-api (Hoffmann),
  draft-hayatnagarkar-dnsext-validator-api)
- per user policies
- Caspar integration
- BSD licenced
- low footprint
- fast
- thread safe
-
